# AI Evaluation Prompts – Recycling Production Line Manager

This document defines the AI prompts used to evaluate candidates for the Recycling Production Line Manager role. Each prompt focuses on a critical competency area and produces a numerical score based on a standardized rubric.

The prompts are designed to be compatible with large language models and can be executed using either real AI APIs or mock responses.

## Evaluation Framework

Each candidate is evaluated across four dimensions:

- Crisis Management
- Sustainability Knowledge
- Team Motivation
- Regulatory Compliance

Each dimension is scored on a scale of **1 to 10**, where higher scores indicate stronger performance.

The final candidate ranking is calculated by summing all dimension scores.

## Prompt 1: Crisis Management Evaluation

### Prompt

You are an AI evaluator assessing a candidate for a Recycling Production Line Manager position.

Evaluate the candidate's ability to manage operational crises such as equipment failure, safety incidents, or supply chain disruptions in a recycling facility.

Consider the candidate's experience, decision-making approach, communication under pressure, and ability to restore operations efficiently.

Return a numerical score from 1 to 10 and a short justification.

### Expected Output Format
